Weight: 1178 g (2.6 lb.)

Supported brackets

The pole mount adapter can be used with the following wall mounts:

Wall mount brackets	TVP-WMB, GEA-102
---------------------	------------------

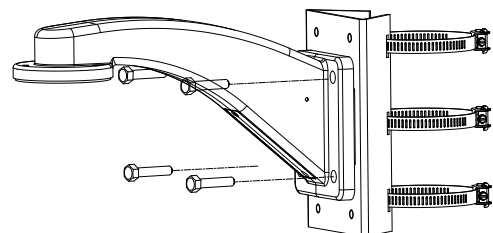

Installation

For the detailed instructions, refer to the installation guide for the PTZ camera that you are installing. The following requirements are mandatory precautions.

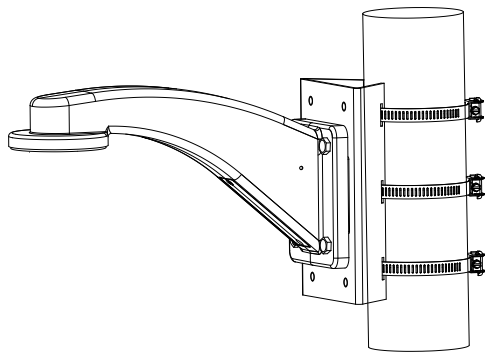

- Ensure that the pole is strong enough to withstand more than eight times the weight of the PTZ camera, wall mount bracket, and pole mount adapter.

To attach a PTZ wall mount to the pole mount adapter (TVP-WM-PM):

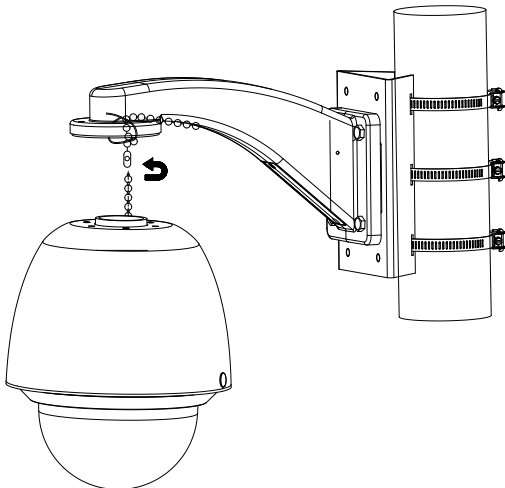

1. Install the PTZ wall mount bracket on the PTZ pole mount bracket with the four screw A's.

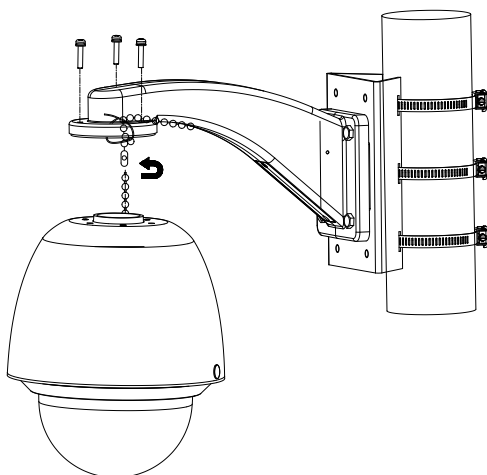

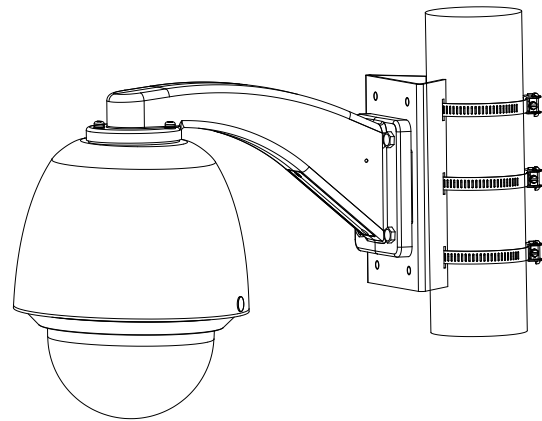

2. Install the PTZ pole mount adapter to a pole using the three hose clamps.

3. Refer to wall mount bracket installation instructions for details on selecting the proper lanyard and installation guidelines. While holding the PTZ camera, attach the safety lanyard to the PTZ camera lanyard.

4. Route the PTZ interconnect cables through the TVP-WMB wall mount. An access panel is provided at the base of the wall mount, which will ease the process of hooking up the interconnect cables to the video system.
5. Refer to the wall mount bracket installation instructions for installation guidelines.
