Advisor Management software

Driving simplicity

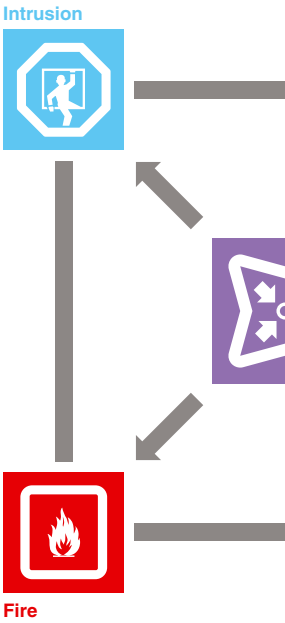

Facility and security management
in a single interface

ARITECH

One single interface controlling multiple complex systems

Security and facility management has evolved into a complex set of business functions, which all need to be managed with the safety and security of the staff, visitors and physical assets as a priority. Factors driving this complexity are numerous: multiple sites, remote locations, flexible working hours, number of employees and visitors, as well as evolving needs.

Therefore only an integrated management solution is able to cope with this evolution, providing facility and security managers with a clear view and control over these different functions.

Imagine one interface to manage and control, whether on-site or remotely, all of your security needs on various premises, ranging from intrusion and fire detection to access control and video surveillance.

Imagine these different systems interacting thanks to a seamless integration enabling verification of events through video streams, and linking intrusion and fire events with access control to safeguard the safety and security of people.

Advisor Management software is providing just this. It allows you to know exactly who is in the building at any given time. Combined with integrated video surveillance, the staff can monitor the building in real-time and thus deliver a safer and more secure environment for all.

A smart way to drive simplicity

Advisor Management software proving...

- **An intuitive graphical user interface, able to provide dynamic floor plans**
- **Only one interface for multiple tasks:** Access Control, Digital Video, Intrusion and Fire Detection. One uniform way to provide user access rights, regardless of the type of security system. The ability to register and track visitors in the building or premises contributes to the safety and the security of personnel and building property.
- **Users with the ability to create and customize reports** on the fly, thanks to advanced reporting capabilities
- **Real time client synchronization** and automatic saving of changes
- Additional functionality between devices **using automatic actions**
- **Scalability to multiple sites, multiple languages and multiple users**
- **Efficient alarm handling**

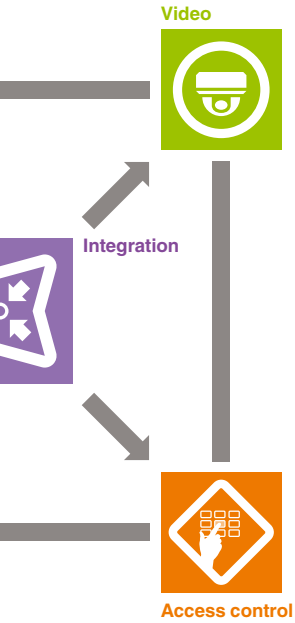

... and easy to install

From registering visitors to controlling visits, work at the reception is made easy using Advisor Management software. The receptionist can guide visits, provide access to certain locations and monitor by video whenever needed.
If the building should need to be evacuated, based on the floor plan and presence of people in the building, the actions required can be taken immediately.

The whole is more than the sum of its parts

Digital video surveillance

Advisor Management software supports a wide range of TruVision digital video recorders and network video recorders. In addition to the quality, ease of use and reliability of these video products, their integration into Advisor Management software allows system operators to have direct access to live and recorded video, providing instant visual verification of events and alarms.

Pan, Tilt and Zoom support for camera systems facilitates the management. As a result, operators can focus on one interface to monitor their facilities rather than operating multiple separately running systems. This makes your security setup more efficient, responsive and reliable, saving valuable time and money.

Intrusion

Advisor Management software supports Advisor Master and Advisor Advanced control panels. It provides alarm management combined with video to quickly and efficiently resolve any alarm. It is easy to configure for people who require access to restricted areas.

If an intrusion is detected, the alarm is pinpointed on the floor plan and a relevant live video stream can be started automatically while lights and doors can be controlled by pressing one button. The presence of intruders is easily verified by switching to recorded video streams and the log file will keep track of the route followed.

Access control supporting multiple sites

Access Control, based on Advisor Master and Advanced, provides complete access in multi-site environments where people need access to more than one site.

The Advisor Management software allows a specific user to gain access where required using the same or unique ID. All this is possible without having to add the user to each site or ID.

Fire

The Advisor Management software supports full integration of latest Aritech fire alarm panels for event monitoring as well as control over the fire alarm system installation. FP1200/FP2000 as well as 2010-2 (2X – 1X through 2X) fire panels are supported.

It provides the operator with an intuitive graphical user interface featuring graphical plans with events dynamically displayed on screen to assist in the rapid location of a fire. This allows for improved response time to fire events and other hazards thus reducing risks to life, property or the environment.

In case of a fire alarm, the location of the alarm will instantly appear on the screen. Activation of a live video stream allows verification of the presence of a fire and, if needed, other video streams can be selected directly from the floor plan. When a raging fire has been confirmed, doors can be unlocked, sounders can be activated, elevators can be brought to the ground level, all while verifying the chain of events with the video system connected.

The security manager is in control and able to handle every event. Whenever an alarm is generated, it can immediately be supported by video, which can be retrieved easily at any time. One database for all functions linked to events, where access rights can be altered, is eliminating all chances for error.

Advisor Management software

For KGS Fire & Security products

One system providing different management views:

- Professional view, enabling complete management control over your system
- Visitor view, enabling management of access and presence in the building
- Alarm monitoring view, enabling management of all events and alarms that occur

ATS8600: Advisor Management starter edition

- Baseline management level
- Maximum of 2 devices for each: Intrusion/Access, Video and Fire
- Unlimited clients
- Badge printing

ATS8610: Advisor Management business edition

- Baseline commercial management level
- Maximum of 25 devices for each: Intrusion/Access,Video and Fire
- Patrol tours & visitor management
- Unlimited clients
- Badge printing

ATS8611: upgrade starter to business edition

* The existing SKU's ATS8641 and ATS8642 are valid for extension of existing systems (2014, 2015) and will gradually be replaced by ATS8651 and ATS8652, which are for all new issued licenses, as from 2016.

Extension to a larger number of devices

ATS8605: extending ATS8600 above 2 devices

ATS8640: extending ATS8610 above 25 devices

Additional drivers*

ATS8651: additional driver for Intrusion
– Advisor Advanced

ATS8652: additional driver for Intrusion/Access
– Advisor Master

ATS8643: additional driver for video
– TVR and TVN TruVision range

ATS8644: additional driver for Fire
– FP1200/ FP2000

ATS8645: additional driver for Fire
– 2010-2 platform: Aritech (2x),Kilsen, Ziton

ATS8647: additional driver for FlexZone
– Perimeter outdoor detection system

ATS8648: additional driver for Verex panels

Services

ATS8690: service upgrade for ATS8600 (does not incl.upgrade for ATS8605)

ATS8691: service upgrade for ATS8610 (does not incl upgrade for ATS8640)

ATS8692: service upgrade for ATS8640 (including upgrade for ATS8610)

ATS8693: service upgrade for ATS8605 (including upgrade for ATS8600)
