Forward Migration

Life Safety System Upgrades

BACKWARDS COMPATIBILITY IS THE WAY FORWARD

When it's time to replace existing life safety equipment, the thought of integrating a whole new system can feel daunting and expensive. That's why EDWARDS products are intentionally designed with forward migration in mind.

INVESTMENT PROTECTION

Your current system was a substantial investment, and it should not be rendered obsolete when we improve our technology. Whether you're updating your smoke detectors, notification devices or entire fire alarm panel, you can rest assured knowing we have designed most of our products to work together across generations, improving the value of your original investment.

LESS COST AND DOWNTIME

Forward migration saves you the trouble of installing large amounts of new wiring and other infrastructure. That means you will experience fewer disturbances and less cost during migration than replacing an entire system.

UPGRADED TECHNOLOGY

The latest technology means better performance and more intelligent functionality. For example, enhancements to our panel technology provide unrivaled cybersecurity protection. That means when external connections are needed, the EST4 firewall helps protect your network from outside threats. And if your system needs servicing, remote connectivity gives service personnel the right information before the first visit, so they're better prepared and can reduce system downtime. Whether you upgrade your panel, detectors, notification devices or emergency communications software, you'll see the difference new technology brings to your properties.

HEALTHY BUILDINGS

When you migrate your system forward, you're doing your part to create safe, healthy buildings that are ready to provide coordinated, timely communications during threats in environments with diverse needs, including high-rise buildings, campuses, and other globally dispersed organizations.

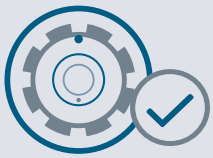

TECHNOLOGY THAT PROTECTS

No matter which component of your life safety system you are upgrading, the benefits of the latest technologies are clear.

DETECTION / OPTICA UPGRADES

Works with EST4, EST3

Get compliant with new standards

Reduce nuisance alarms & maintain productive properties

NOTIFICATION / GENESIS UPGRADES

Seamless integration with existing Genesis devices

LED strobes meet 20ms pulse requirements

90% lower current draw at 24mA no matter the Candela

INCIDENT MANAGEMENT / FIREWORKS GUI UPGRADES

Enhance your cybersecurity & user experience

Integrates with other systems

PANEL MIGRATION FROM EST3 TO EST4

Increased Survivability with Distributed Audio

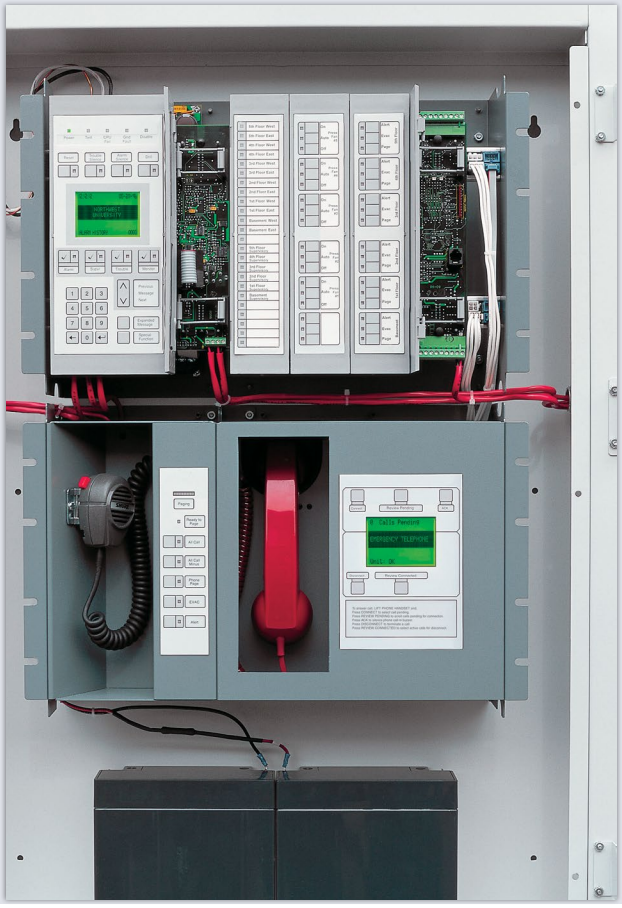

EN54 Firewall for Cyber Protection

Flexible Network Configurations

200 Digital Audio Channels

Email Notifications

EST3

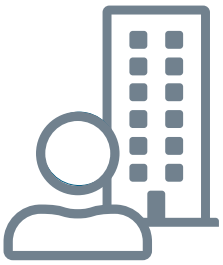

EST3 CONVERTED TO AN EST4

MOVING FORWARD WITH EST4

Our partners have migrated customers in several industries to EST4, and from installation to practical use, the latest technology has improved every touchpoint.

"The EST4 highly flexible network topology made it possible for panel-to-panel communication to use the client's spare campus fiber media for campus-centralized reporting. That alone saved significant cost."

PROJECT MANAGER OF A
COMMERCIAL HIGH RISE INSTALLATION

"All pre-recorded messages reside on every panel CPU, so you can have centralized and local messaging. This increases survivability."

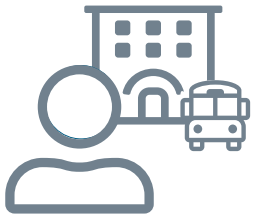

PROJECT MANAGER OF A
MANUFACTURING PLANT INSTALLATION

"The AHJ eliminated the requirement for CI (Circuit Integrity) cabling on the initiating and notification circuits for the simplified fire alarm network. In turn, the building owner saved approximately 25% of the installation costs."

PROJECT MANAGER OF A
RESIDENTIAL COMPLEX INSTALLATION

"EST4 lets you deploy the best options available. In this case, due to the network topology configuration of the school, we didn't need as much fiber cable compared to EST3."

PROJECT MANAGER OF AN
ELEMENTARY SCHOOL INSTALLATION

"When it comes to downloading, the EST4 is 20x faster than an EST3. All my end-users know it takes a long time for software updates; even a minor change at some sites means paying for a technician all day. But not with EST4."

PROJECT MANAGER OF A
COLLEGE CAMPUS INSTALLATION

"The touchscreen user interface greatly improves ease of use! No more looking in a directory or device map or having to write down a 10-digit number to simply disable a device."

PROJECT MANAGER OF A
HOSPITAL INSTALLATION

CUSTOMISABLE SOLUTIONS THROUGH A DEDICATED PARTNER NETWORK.

No one knows your facility better than you, which is why you need a partner you can count on to provide the best in fire and life safety solutions for your unique application. Edwards' network of partners—the people we entrust with our technology—provide unrivaled system design, service and know-how to deliver solutions that meet stringent life safety requirements. And they're ready to do the same for you.

See what's possible for your facility. Contact your Edwards Partner today.
