TruVision® Navigator

Centralized control for maximum security

Intuitive. Powerful. Integrated

More than just a video management software solution, TruVision Navigator brings Interlogix commercial offerings – video, access control and networking – together as one integrated security solution. Ideal for small to mid-size applications, the system provides powerful centralized and remote management capabilities, so users can manage every aspect of their TruVision-based security system, easily and effectively.

Feature rich for improved functionality

TruVision® Navigator provides added convenience and improved functionality to the TruVision platform. Easy to install and maintain, the updated software delivers centralized video, access control, streamlined operations and more for commercial applications.

User-friendly interface

TruVision Navigator brings together video monitoring, TruPortal access control and IFS® network switches into one centralized interface. Robust and easy to use, the interface's key features include up to 10 video tabs, custom views, facility/campus maps, live event monitoring, video playback and 360° camera de-warping.

Scalable and compatible

TruVision Navigator is a fully scalable solution that can be used as a standalone application, or deployed in a server/client environment. The system also offers backwards compatibility support for most legacy TruVision recorders, making system upgrades easy and affordable.
The application easily integrates and manages TruPortal access panels and IFS network switches via the built-in device discovery tool.

High-quality and affordable

Available with no annual fee and no software maintenance agreements, TruVision Navigator is an easy-to-use, yet robust, commercial security solution*.

Standard features

Core TruVision Navigator features
- Up to 10 video tabs with video sequencing and custom views
- Live/playback video viewing from TruVision IP cameras (with SD cards)
- TruVision 360°, 180° panoramic and PTZ cameras dewarping
- Camera locations displayed on maps with full camera control
- Embed maps within maps and add relay outputs to maps
- Notifier that displays live color-coded device events
- Real-time event monitoring with live pop-up video
- View, acknowledge and filter all events with the Event Center
- Object counting support (reset count, graphical data and remove OSD)
- TruVision device network discovery and configuration
- Standalone and client/server architecture
- Built-in admin permissions, management and diagnostics tools
- USB keypad/joystick support

Advanced features

Advanced video features
- Logical device view in device tree and logical Notifier event filtering
- Real-time device bandwidth monitoring
- Server off-line mode — client operation when server is offline
- Built-in web browser support for viewing/saving web pages
- Built-in Device Manager provides easy activiation and set-up of TruVision devices
- Video bookmarking with bookmark manager

TruPortal access control integration
- TruPortal panel discovery on a network
- Multiple panel configuration and management
- Global lockout and reinstate
- Add TruPortal panels and door locations on maps
- Unlocking doors remotely from map or the device tree
- Linking cameras with doors for event monitoring with pop-up video verification
- Easy searching or filtering TruPortal notifications

IFS network switch web client integration
- Built-in IFS network switch discovery on a network
- IFS network switch log-in and configuration

* Hardware for TruVision Navigator is sold separately.
